The handover of the first MAN TGEs to Energy Assets Utilities took place in June. 33 new vans will be based at EAU's Alva base in Scotland. They will be followed by a further 40 vehicles destined for operations in England and Wales. All in all the company's commercial fleet embrace over 200 vehicles. The investment will support utility network construction at residential and commercial developments across Britain and reflects a customer commitment to invest in technology that drives reliability and quality. The key competence of Energy Assets Utilities is to take care of the gas, electricity, and water infrastructure of their customers.

The new MAN 3.5 tonne TGE diesel vehicles are energy efficient and equipped among others with incorporate navigation, along with reversing cameras, parking sensors and speed limiters. Energy Assets Utilities (EAU) new MAN fleet additions are all TGE 3.140 with standard wheelbase, high roof model and 6-speed manual transmission. The first vehicles to enter service are Rear Wheel Drive models, however some Front Wheel Drive versions are currently in build.

Steven Lynch, Managing Director of EAU (Scotland), commented: "We are committed to investing in technologies that improve the service we provide to customers, whether on-or-off site. These new vehicles are more energy efficient and include on-board systems that will improve both operational effectiveness and the safety of our people, which in turn will support our reliability and quality commitments to our growing customer base."

MAN Truck & Bus is one of Europe's leading commercial vehicle manufacturers and transport solution providers, with an annual revenue of some 11 billion euros (2018). The company's product portfolio includes vans, trucks, buses/coaches and diesel and gas engines along with services related to passenger and cargo transport. MAN Truck & Bus is a company of TRATON SE and employs more than 36,000 people worldwide.
